

Seneca® Completes Arteco Certification for VEMS Platforms
xVault Video Surveillance Hardware is Certified for all NVR and Client Systems

Syracuse, NY, December xx, 2014 - [Seneca®](#), an Arrow company and leading custom hardware and appliance manufacturer providing optimized, certified, and guaranteed solutions for the digital security and surveillance market, today announced a strategic partnership with Arteco and completed hardware certification for the Video Event Management Software (VEMS) systems. The Arteco certification provides integrators and their customers' peace of mind that xVault network video recorder platforms have been tested with Arteco-Server to ensure superior performance.

Seneca is very excited to announce the development of this partnership and completion of Arteco software certification," said Ron VanTassel, market development manager, Seneca. "The completion of Arteco testing allows Seneca to provide distributors, integrators and their customers with hardware recommendations to deploy xVault NVRs into new or existing deployments and deliver peace of mind that the system will work together, from storage, servers, and client workstations."

The digital security and surveillance market is constantly evolving, making it difficult to determine the best solution for your project. The software certification ensures integrators and end users that their chosen network video recorder is verified and designed to work as intended with Arteco software platforms. Seneca continues to develop strategic partnerships within the surveillance industry to build a strong solutions-based approach with leading manufactures.

"We are extremely pleased to be working with the Seneca team offering hardware solutions from one to hundreds of cameras with Arteco software," said Steve Birkmeier, Vice President of Sales and Business Development at Arteco. "The Seneca hardware partnership aligns with our software product suite and strategic channel plans in the market."

Strategic benefits of certified hardware solutions with Arteco software:

- Storage platforms verified to provide performance and capacity requirements by the VMS
- Creates an optimal customer experience with a reliable video surveillance solution
- Combined expertise with strong partnership from leading hardware and software manufactures
