

# CANNABIS INDUSTRY

The legal cannabis industry requires intelligent video surveillance and security solutions to help secure inventory, ensure compliance oversight, reduce risks and maintain workplace protection. Video analytics are also critical as they automate monitoring and help users gain new levels of insight to mitigate threats. Facial recognition can be used to match against a list of approved workers. Integration with other systems and sensors, such as seed-to-sale and building automation software provide unparalleled operational effectiveness.

## THE ARTECO DIFFERENCE

Arteco Video Event Management Software (VEMS) is designed to help grow facilities gain access to the most relevant video and security information at any given time. The focus is on identifying critical events and areas of interest, rather than sifting through hours of non-critical video footage. Operators can 'see the difference' to help ensure the protection of residents, employees, data and infrastructure.

## EVENT INTELLIGENCE

Arteco VEMS empowers providers to make sense of a vast amount of video data, making 24/7 monitoring less cumbersome. The system allows users to ignore unimportant data by focusing on the most important information to increase informed response, increase situational awareness and improve overall security management.

## INTUITIVE MANAGEMENT AND OPERATION

The VEMS interface unifies alarms and notifications from multiple devices and systems into a single, intuitive interface. The platform is also customizable to the requirement of each grow facility.

## OPEN, FLEXIBLE AND SCALABLE

Its open platform eases integration of third-party solutions. Arteco complies with a wide range of global security standards. Arteco Open Connector provides deeper integration options, allowing grow operations to build a best-in-class security and operations solution, regardless of manufacturer.

## COST EFFECTIVE

Arteco solutions require fewer installation and training hours, aiding in cost-efficiency for sites that must meet strict budgetary requirements. Over time, stakeholders see a reduction in total cost of ownership and increased ROI by choosing to invest in a solution that enhances intelligence, management and flexibility.

## ADVANCED INTELLIGENCE AND DETECTION

Arteco Analytics Extreme offers virtual trip-wire detection while license plate recognition tracks vehicles entering and leaving a facility. Facial recognition and biometrics can be used to track against watch lists or easily provide access to pre-approved individuals. Arteco also integrates with perimeter detection devices including microwave barriers, fence sensors and more.

# CANNABIS INDUSTRY

## ARTECO VIDEO MANAGEMENT

- Easily expandable and scalable
- Simple integration of third-party devices and systems
- Built-in video analytics
- One-time license charge and no recurring license fees
- Two years of feature updates included
- Free onsite training opportunities
- Complimentary 24/7 Web and phone support
- Customers can customize interface to meet specific needs

## GROWHOUSE MANAGEMENT

- Tie all of your building automation, seed-to-sale software data points, and security devices to your Video Security
- Time-stamped events throughout cultivation process with key data
- Receive Temperature Threshold, Electrical consumption alarms while controlling lighting and irrigation

### 2016 TOP 30 TECHNOLOGY INNOVATION AWARD WINNER

Arteco is the recipient of Security Sales & Integration's 2016 Top 30 Technology Innovations for Open Connector.

The award program recognizes the most noteworthy new products and services that provide overarching benefits to users and demonstrate innovation.

### 2017 GOVERNMENT SECURITY AWARD WINNER

Arteco is the recipient of a 2016 Campus Safety BEST award for Open Connector in the Video Surveillance Software category. The award program, presented by Campus Safety Magazine, recognizes the most noteworthy new products and services that can impact campus safety and security.

**ABOUT ARTECO** Arteco is a global provider of event-driven intelligence solutions based in Faenza, Italy, with U.S. operations in St. Louis, Mo. With a focus on ease of use and event management, Arteco provides an open, scalable Video Event Management Software platform designed to optimize security, operational and business intelligence.
