

## CASE STUDY

SECTOR: LOGISTICS AND  
TRANSPORTATION

CUSTOMER: GLOBAL PUBLIC  
TRANSPORTATION SYSTEM

LOCATION: EUROPE

# ARTECO PROTECTS HISTORIC TRANSPORTATION CENTER IN MAJOR EUROPEAN CITY

This international destination is the only city of its kind in the world. Its historic centre is surrounded by water and crossed by waterways. Residents and visitors travel by foot, boat or public transportation, which carries 95 million passengers annually via 120 floating stations and 30 connected rail lines.

When the agency decided to expand its video surveillance infrastructure, it selected Arteco Active NEXT as its video management solution. The platform and 80 Arteco NVRs support more than 400 cameras, which keep a watchful eye on the organization's dockyards, ticket vending machines, vehicle network and parking lots.

Arteco Video Event Management Software (VEMS) is designed to help organizations gain the most relevant video and security information at any given time. The focus is on identifying critical events and areas of interest, rather than sifting through hours of non-critical video footage. The VEMS interface unifies alarms and notifications from multiple devices and systems into a single, intuitive interface and its open architecture eases integration with third-party solutions.

The transportation center selected Arteco as its video management platform because of its intelligent capabilities, ease-of-use, comprehensive device management via Arteco Maps and privacy settings. Because of its success with the Arteco VEMS, the public agency plans to add advanced video analytics, including loitering, trespassing, intrusion, and abandoned/removed objects.
