High speed cameras and maximum resolution: Arteco adds another Lilin camera to its integrated offering

FAENZA, Italy - Arteco Global, the leader in the manufacturing Video Event Management Software (VEMS) solutions worldwide, has now integrated the ultra-high definition 4K IP cameras from LILIN, as well as the 120 FPS (frames per second) camera that streams at 1080P resolution. The integration was adopted using the ONVIF protocol and adds to the long range of over 25 bullet and PTZ camera models already integrated since 2013.

Arteco's integration was announced at this year's annual IFSEC trade show held in London in June of this year. The show represented an excellent platform to introduce the wide range of VEMS solutions and camera integrations, including the LILIN integration.

The Team at Arteco is convinced that the integration of the LILIN camera will be another indicator of the continued effort on the part of both companies to pursue further cooperation in their technical partnership.

The partnership will strengthen the VEMS offering to system integrators and customers, combining LILIN's high-quality hardware and Arteco's streamlined, state-of-the-art VEMS solutions. The partnership has seen both companies proactively sharing information to facilitate future planning and support, and provide the necessary tools and technical support for the integration to be successful.

System integrators and LILIN's partners will also receive multiple benefits including access to technical information such as testing and demo licenses, solution roadmaps and go-to-market resources, including brochures, datasheets and partner branding.

Marco Siepi, Global Marketing Manager at Arteco, commented, "We are extremely thrilled with the opportunity of continuing our partnership with LILIN by integrating their high quality cameras with our competitive, cutting-edge VEMS, Arteco Logic NEXT. The quality of the IP offering from LILIN is highlighted prestigiously by the inclusion of their state-of-the-art 4k and 120FPS cameras in our integrated offering. Moreover, LILIN's worldwide distribution, combined with its professional salesforce and consolidated reputation, make the company an ideal partner for our strategic offering to clients and partners alike around the world."

“By integrating the Artec Technology into to our advanced solutions portfolio is an excellent opportunity to enhance the visibility of our products to a range of high level projects as the ones worldwide managed by Artec. Our new 4K and 120fps technologies and our consolidated iMEGAPRO solutions will be proven in a highly qualified set of projects requiring high level technology and advanced technical competence. This opportunity is extremely relevant for us and we will stay concentrated in having it maximized,” said Steve Hu, Senior Product Manager of LILIN Global.

About Artec Global Founded in 1987, ARTECO is a global provider of Video Security products based in Faenza, Italy with US operations in St. Louis, MO. With a focus on Ease of Use and Resource Management, Artec’s Research and Development principles have united world-class video analytics and video management software on a single-platform at competitive price-points to standard Video Management Software (VMS) products. Artec views Video Analytics as an enhancement to the video security experience and not as a costly addition or complication to standard video management. Artec products are available through their dedicated team of certified Integrator Partners around the world, including the United States, Italy, South Africa, Poland, and Canada.
