

# Welcome to uSee

### 1 - New Sidebar

With the aim of providing greater clarity and usability, we introduced on uSee a **new sidebar with dual view mode**. The sidebar can be opened or closed using the hamburger menu/close buttons:

While the sidebar is closed, all environments and configuration in the sidebar are still accessible.

#### 1 - New Sidebar

#### **ENVIRONMENTS**

#### SITE LIST

#### **CONFIGURATION**

### 2 - Site List

Servers are organized **as per sites**, and sites are organized in **alphabetical order**.

The site list also indicates **how many servers a site has**, and **how many servers are online**.

Site list shows servers with **active cameras** in your layout.

#### 3 - Events

We designed a **new notification button** in the top bar.

In addition, you can also access the Live events panel **directly from the sidebar**.

### 4 - Thumbnail Search

**Thumbnail Search** is separated from the event panel and now has **its own environment.** 

#### How to use the Thumbnail Search

Step 1: Open Thumbnail Search in sidebar
Step 2: Select your time frame for the search

Thumbna	ail Searc	:h			⇔ 台
SEARCH INTE	RVAL	1h	12h	24h	
FROM:				Ħ	
то:				ŧ	
	<b>Q</b> Se	arch			

### 4 - Thumbnail Search

Step 3: Select the cameras
Step 4: Search

**Step 5:** (optional) You can go directly to the playback environment for that camera(s) and timeframe from the thumbnail search with this button:

## **5 - Improved Page Navigation**

#### Ever wondered what environment you are currently in?

We added **page navigation indicators** to the top bar.

The current environment can be seen next to the uSee logo:

When the sidebar is closed you will only see the environment's icon:

#### Want to log out or see your user settings?

The user button allows you to **logout**, as well as view your **account settings**.

### 6 - Display Layouts

Currently on Omnia Web you see all your active layouts in a tab layout in the top bar.

uSee offers you the **ability to choose** how you would like to display the layouts, either in a **tab layout** as previously, or you can see them in a **dropdown**.

TAB LAYOUT						
Second state       Second state         Second state       Second state						
DROP DOWN						
Stelders → Stelders → Stelders →	ltilities sourt_4 ∧ ⊡					
	88 layout1	×				
	器 testing the bug	×				
	88 new layout	×				
	器 new layout_1	×				
	器 new layout_2	×				
	器 new layout_3	×				
	88 new layout_4	×				

To select which way you want to see the layouts, you must switch it on in the user settings, under the "layout settings" tab.

#### 7 - Layouts

If you accidentally close a layout:

You can **easily reopen** that layout from the "Layout Folder" dropdown:

Sector Secto	~ (
search	
Not grouped	$\sim$
- Less used	$\sim$
folder 1	$\sim$
folder 2	$\sim$
folder 3	$\sim$
folder 4	$\sim$
folder 5	$\sim$
folder 6	$\sim$
S Layout configuration
