

Feature:

Recording Environment – Scrolling Modes Enhancement:

Introduced two distinct scrolling modes for the recording timeline bars, selectable via a dedicated toggle.

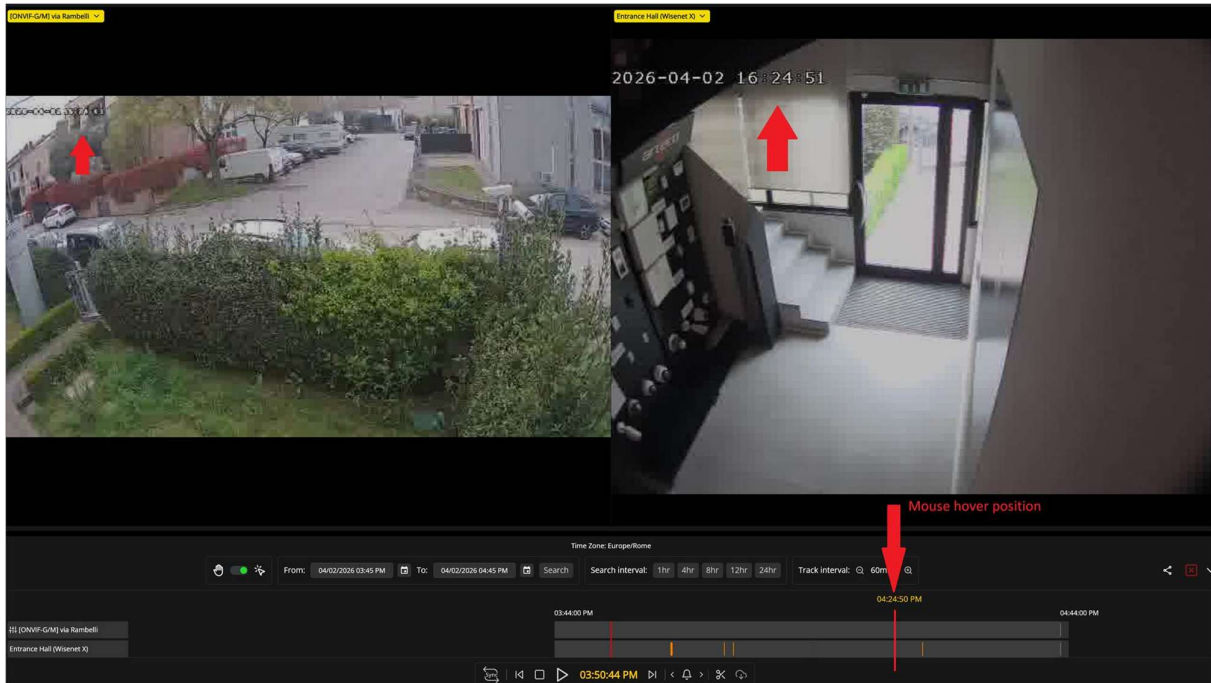

Scrolling Mode:

Drag Mode: enables horizontal navigation by dragging the timeline left or right.

Click Mode: allows navigation through direct clicks on the timeline; each click re-centers the selected timestamp within the panel.

In Click Mode, added hover preview functionality: moving the mouse cursor over the timeline displays thumbnails on the layout corresponding to the cursor position.

Recording Timeline – Track Interval Enhancement:

Added a new "Max" option to the Track Interval settings.

This allows the recording timeline to automatically zoom, fitting the entire selected search interval within the visible panel.
